Moellerodiscus Henn.

The phylogenetic relationships of many of the genera in *Rutstroemiaceae* remain poorly understood (e.g. [Zhao et al. 2016](#), [Baral et al. 2023](#)). Amongst these is *Moellerodiscus*, sometimes treated as a synonym of *Ciboria*, but a name still in wide use and generally accepted as *Rutstroemiaceae*. The type species *M. brockesia* has no DNA sequence data available. The GenBank accessions placed in *Moellerodiscus* represent at least five separate genus-level clades (P.R. Johnston, unpubl. data).
