### *Hamatocanthoscypha* Svrcek

Three different species, two from Japan and one from Europe, are labelled in GenBank as *Hamatocanthoscypha laricionis*, the type species of *Hamatocanthoscypha*. All three species fall in *Hamatocanthoscyphaceae* and of them, it is likely that the species from Europe (with specimens from the United Kingdom and the Netherlands, voucher specimens K(M)158578 and SBRH935 respectively) better represents the true *H. laricionis*, a species originally named from European material (Velenovsky 1934, as *Uncinia laricionis*). See also notes under *Hamatocanthoscyphaceae*.
