Obtectodiscus E. Müll., Petrini & Samuels

Obtectodiscus is an aquatic ascomycete, in the protologue described as being partly perithecioid and partly apothecioid. Its morphology was compared to *Loramycetes*, with which it also shares a *Cyperaceae* substrate (Müller et al. 1980). Previously classified in *Loramycetaceae*, this family was placed in synonymy with *Mollisiaceae* by Tanney & Seifert (2020).
