Theadgonia B. Sutton

Based on a specimen identified as the type species *Theadgonia ligustrina*, (GenBank GU269839 ex culture CBS 123025), *Theadgonia* is *Drepanopezizaceae*. Although based only on the ITS phylogeny, *Drepanopezizaceae* is well resolved as a clade with this phylogeny (Johnston et al. 2019). The biology of this fungus, causing a leaf spot of *Ligustrum*, is consistent for *Drepanopezizaceae*.
