***Banningia* Y.P. Tan & G.S. Pegg**

Tan et al. (2023) introduced *Banningia* under *Saccoltheciaceae* (*Dothideales*, *Dothideomycetes*, *Ascomycota*) to accommodate single species, *B. maryelizabethiae* as type species. *Banningia maryelizabethiae* was isolated from the branch of *Corymbia citriodora* (*Myrtaceae*) in Australia. However, this new genus was described based only on phylogeny and it formed a distinct phylogenetic clade. It has only an ITS gene and no morphological description, so this genus still needs to collect more data to further validate its taxonomic position.
