

## Outlineoffungi.org - Note 1522 *Eidernor*

**Web-links:** [Index Fungorum](#), [Facesoffungi](#), [Mycobank](#), [GenBank](#)

***Eidernor*** Y.P. Tan & Bishop-Hurley

The monotypic genus Thompson et al. (2023) introduced *Eidernor* under *Exobasidiales* (*Exobasidiomycetidae*, *Exobasidiomycetes*, *Ustilaginomycotina*, *Basidiomycota*) to accommodate *Eidernor doerrieniae* Y.P. Tan & Bishop-Hurley based on morphology and phylogenetic analyses using ITS sequence data. The type species was reported in Australia on dead *Araneae*. Sequences related to *Eidernor doerrieniae* can be found in GenBank with the accessions OR290117 (ITS) and OR288583 (LSU). When comparing the ITS region, *Eidernor doerrieniae* shows differences from the reference strain *Rhamphospora nymphaeae* (CBS 172.38) (Thompson et al. 2023).
