

## Outlineoffungi.org - Note 26, [Anastomitrabeculia](#)

[Anastomitrabeculia](#) Bhunjun et al.

Based on morphology, multi-loci phylogeny and divergence times estimates, [Anastomitrabeculia](#) was introduced by [Bhunjun et al. \(2021c\)](#) based on *A. didymospora*. [Anastomitrabeculia](#) is characterized by the presence of carbonaceous ascomata, with orange pigmentation near the ostioles and ascospores with longitudinally striate wall ornamentation. It is similar to members of *Pleosporales* in having perithecioid ascomata, bitunicate asci and hyaline ascospores ([Bhunjun et al. 2021c](#)) (M. Erdoğan).
