

Outlineoffungi.org - Note 267, [Macroconstrictolumina](#)

[Macroconstrictolumina](#) Lücking et al.

[Hongsanan et al. \(2020\)](#) introduced [Macroconstrictolumina](#) to encompass four lichenized species. Among these, three species were previously assigned within *Constrictolumina* and transferred to a newly established genus [Macroconstrictolumina](#) based on ascospore morphology. The genus formed a sister clade to *Bogoriella* in the phylogenetic analysis ([Thiyagaraja et al. 2021a](#)) (V. Thiyagaraja & A. Aptroot).
