[Marquandomyces](#) Samson et al.

The known distribution of this genus is Brazil, Netherlands, Russia, the UK and the USA. [Marquandomyces](#) has been isolated in mushrooms and soil. Molecular analyzes have been performed as well as macro and micro morphologies ([Mongkolsamrit et al. 2020](#)). Moreover, this was introduced after resolution of *Metarrhizium s. lato* based on a 5 DNA loci genealogy (F. Selcuk & M. Stadler).
