

Outlineoffungi.org - Note 276, *Melanocamarosporioides*

Melanocamarosporioides D. Pem et al.

[Pem et al. \(2019d\)](#) introduced *Melanocamarosporioides* with *M. ugamica* as the type species. *Melanocamarosporioides* is characterized by superficial to erumpent, uniloculate conidiomata, and globose ellipsoidal or ovoid, dark brown, multi-septate conidia. *Melanocamarosporioides* is closely related to *Melanodiplodia* and forms a lineage in [Melanommataceae](#) with strong statistical support (D. Pem).
