

Outlineoffungi.org - Note 326, [Neosonderhenia](#)

[Neosonderhenia](#) Crous

[Crous et al. \(2019c\)](#) introduced [Neosonderhenia](#) to accommodate two new species based on the phylogenetic analyses and morphological characters. The genus is typified by *N. eucalypti* collected from *Eucalyptus costata* in Australia. [Neosonderhenia](#) has pycnidial conidiomata, distoseptate conidia with a central pore, brown, percurrently proliferating conidiogenous cells, and a teratosphaeria-like sexual morph ([Crous et al. 2019c](#)) (M. Erdoğan).
