

Outlineoffungi.org - Note 340, [Nothoanungitopsis](#)

[Nothoanungitopsis](#) Crous

[Crous et al. \(2021c\)](#) described the monotypic genus [Nothoanungitopsis](#) to accommodate [N. urophyllae](#) based on the phylogenetic analyses and morphological characters. Although [Nothoanungitopsis](#) has unthickened conidiophore scars and conidial hila as in *Anungitopsis*, it is distinguished by lacking globose, brown swellings in its conidiophores, and having conidia that are unevenly pigmented, with two brown central cells ([Crous et al. 2021c](#)) (M. Erdoğan).
