

Outlineoffungi.org - Note 351, [Obliquiminima](#)

[Obliquiminima](#) W. Dong et al.

[Dong et al. \(2021a\)](#) introduced [Obliquiminima](#) in *Cancellidiaceae*, which is the first sexual morph linked by molecular data and morphologically similar to *Annulatasceae* species. [Obliquiminima](#) is morphologically similar to *Ayria*. However, it differs in having superficial ascomata, with a lateral neck that oblique to the host substrate, narrowly obclavate asci with a refractive apical ring ([Dong et al. 2021a](#)) (M. Erdoğan & W. Dong).
