

Outlineoffungi.org - Note 374, [Paramyctinis](#)

[Paramyctinis](#) R.H. Petersen

The genus comprises two antipodal taxa related to *Mycetinis*. Both [Paramyctinis](#) species are characterized by luxuriant rhizomorphs, with basidiomata arising occasionally as side branches but also separately from rhizomorphs ([Petersen & Hughes 2020](#)) (M. Erdoğan).
