

Outlineoffungi.org - Note 42, [Arboricolonus](#)

[Arboricolonus](#) S. Bien & Damm

During a survey of fungi associated with wood necrosis of *Prunus* sp. trees in Germany, strains belonging to *Leotiomyces* and *Eurotiomyces* were detected by preliminary analyses of ITS sequences. Multilocus phylogenetic analyses (LSU, ITS, *tub*, *EF-1 α* , depending on the genus) of some strains from *Prunus* sp. and reference strains revealed several new taxa, including [Arboricolonus](#) (F. Selcuk).
