

Outlineoffungi.org - Note 452, [Rhomboidia](#)

[Rhomboidia](#) C.L. Zhao

[Rhomboidia](#), typified by *R. wuliangshanensis*, was introduced by [Xu et al. \(2020c\)](#) based on morphological and molecular evidence. [Rhomboidia](#) is characterized by annual, stipitate basidiomes with rhomboid pileus, a monomitic hyphal system with thick-walled generative hyphae bearing clamp connections, and broadly ellipsoid basidiospores with thin, hyaline, smooth walls ([Xu et al. 2020c](#)) (M. Erdoğan).
