

## Outlineoffungi.org - Note 502, [Tanmaurkiella](#)

[Tanmaurkiella](#) Santam.

This genus was proposed by [Santamaria & Pedersen \(2021\)](#) to accommodate *T. huggertii* and *T. pselaphi* (type), two species associated with *Pselaphus heisei* (Coleoptera, Staphylinidae). The genus was distinguished from related genera *Bordea*, *Cryptandromyces*, and *Siemaszkoa* based on morphology and ecology (host information) (D. Haelewaters).
