

Outlineoffungi.org - Note 505, [Terrestriporia](#)

[Terrestriporia](#) Y.C. Dai et al.

[Wu et al. \(2020\)](#) introduced [Terrestriporia](#) within the *Terrestriporiaceae* to accommodate *T. alba* as the type species. [Terrestriporia](#) resembles *Anomoporia* and *Anomoloma* in sharing annual and resupinate basidioma, a monomitic hyphal structure, and hyaline, thin-walled, smooth and amyloid basidiospores (Ryvarden & Melo 2014), but the latter two genera have clamp connections only, lack gloeoplerous hyphae and cystidioles, and belong to *Amylocorticiales* (M. Erdoğdu).
