

Outlineoffungi.org - Note 533, *Verrudisporonites*

Verrudisporonites O'Keefe (fossil)

This monotypic genus, recorded from the Heath Formation of Peru, is characterized by dicellate spores with two large pores and differs from *Dyadosporites*, *Dicellaeporisporites*, *Didymosporonites*, *Ornasporonites* and *Teleutospora* in having large verrucae on the surface (R.K. Saxena).
