

## Outlineoffungi.org - Note 582 [Ceratolentaceae](#)

**Web-links:** [Index Fungorum](#), [Facesoffungi](#), [Mycobank](#)

[Ceratolentaceae](#) K.D. Hyde & Hongsanan

The family was introduced by [Hyde et al. \(2021\)](#) to accommodate the monotypic genus *Ceratolenta*, which was typified by *C. caudata* ([Réblová et al. 2013](#)). Phylogenetically *Ceratolenta* is closely related to the *Bullimyces* ([Réblová et al. 2013](#); [Maharachchikumbura et al. 2015](#); [Luo et al. 2019](#)). The two genera can be distinguished from each other by their paraphyses, asci and ascospore characters ([Hyde et al. 2021](#)). Therefore, based on these morphological differences and their divergence estimates within the family range, [Hyde et al. \(2021\)](#) introduce a new family [Ceratolentaceae](#), in order *Ceratolentales* to represent the genus *Ceratolenta*.
