[Bolbea](#) Buaya & Thines

The diagnostic features of this genus is based on [Bolbea parasitica](#) and are holocarpic parasitoid *Oomyces*. The genus differs from *Atkinsiella* by the lack of sacculate hyphae in culture and from *Blastulidium* by its much more infrequent hyphal constrictions and more regular hyphae. It differs from other members of the *Leptomitales* by its crustacean host ([Buaya & Thines 2020](#)) (F. Selcuk).
