

## Outlineoffungi.org - Note 81, [Brochiosphaera](#)

[Brochiosphaera](#) K. Yamag. et al.

[Brochiosphaera](#) was introduced by [Yamaguchi et al. \(2020\)](#) based on [B. brochhiata](#) collected from a balsa-wood block immersed in water. Conidial characteristics of this genus are different from those of *Candelabrum sensu stricto*, synonymized in *Hyaloscypha*, because of its orange conidia and no basal plate in the conidium, which is composed of dichotomously or trichotomously branched cells ([Yamaguchi et al. 2020](#)) (M. Erdoğan).
