Eriomycetaceae Huanraluek & K.D. Hyde

Zhang et al. (2023) resurrected *Eriomycetaceae* as a separate family within *Monoblastiales* based on morphological and phylogenetic analysis. Nine non-lichenized genera (*Eriomyces*, *Funbolia*, *Haudseptoria*, *Heleiosa*, *Karstiomyces*, *Italiofungus*, *Neoheleiosa*, *Phellinocrescentia* and *Pseudopassalora*) were listed in *Eriomycetaceae*, while six lichenized genera (*Acrocordia*, *Anisomeridium*, *Caprettia*, *Megalotremis*, *Monoblastia* and *Trypetheliopsis*) were listed under *Monoblastiaceae*. Zhang et al. (2023) Ascomycetes from karst landscapes of Guizhou Province, China.
